

Now seeking: Software Developer

sociomantic labs is a young high-tech startup in the heart of Berlin developing internet based technologies that leverage the power of social networks. Our customers come from the areas of customer relationship management and online advertising.

We are looking for support of our international team in our research and development department.

OUR OFFERING:

- Full time permanent employment
- Access to a high-profile professional network of international internet companies
- Possibility to show your excellent competence and your creative ideas to a broad audience
- Basic German language courses for non-native speakers
- Help with residence/work permit processing for non-EU citizens
- Awesome office in the heart of Berlin's Mitte district
- Personal development and training of your skills and talents alongside an awesome, passionate, and experienced team
- Adequate compensation & incentive plans

About us:

The sociomantic labs were born out the joint expertise and passion of its founding members in the areas of computer science, social network analysis, and communications management. Back in 2006, the first inklings of the company were manifested in the work of two research associates at the Institute for Media and Communications Management at the University of St. Gallen, Switzerland. The labs were officially founded in January of 2009.

Today, we are a fast-growing private limited company based in the heart of Berlin, but the international experience of our team ties the company to many parts of the world, from Australia to Texas and back again. We are driven by a constant curiosity about new technologies and our communal dedication to innovation. Our high-level industry experience and digital media know-how enable our team to develop and deliver the highest standards in internet services.

YOUR RESPONSIBILITY:

- Support our team on the development of our service oriented infrastructure (SOA)
- Develop scalable RESTful (XML/JSON) Web Services (API's)
- Build Web Services connected to our new distributed database solution based on P2P architecture
- Development of distributed database technologies
- Development of graph based algorithms

YOUR SKILLS AND TALENTS

- Degree in Computer Science, or closely-related
- Knowledge of Eclipse and SVN code repository
- Strong interest in service oriented architecture and web service development
- Experienced in C, C++ or D
- Enthusiasm for electronic music, digital art and an international lifestyle
- Open mind and a great attitude
